READEX FICHE best copy available

Bibliographies in the Quick Bibliography Series of the National Agricultural Library, are intended primarily for current awareness, and as the title of the series implies, are not indepth exhaustive bibliographies on any given subject. However, the citations are a substantial resource for recent investigations on a given topic. They also serve the purpose of bringing the literature of agriculture to the interested user who, in many cases, could not access it by any other means. The bibliographies are derived from computerized on-line searches of the AGRICOLA data base. Timeliness of topic and evidence of extensive interest are the selection criteria.

The author/searcher determines the purpose, length, and search strategy of the Quick Bibliography. Information regarding these is available upon request from the author/searcher.

Copies of this bibliography may be made or used for distribution without prior approval. The inclusion or omission of a particular publication or citation may not be construed as endorsement or disapproval.

To request a copy of a bibliography in this series, send the title, series number and self-addressed gummed label to:

DOCUMENT DELIVERY SERVICES TO INDIVIDUALS

The National Agricultural Library (NAL) has a unique responsibility to supply copies of agricultural materials not found elsewhere.

Filling requests for materials readily available from other sources would divert NAL's resources and diminish its ability to serve as a national source for agricultural and agriculturally related materials. Therefore, NAL should be viewed as a library of last resort and individuals should submit requests first to local or state sources prior to sending to NAL. In the United States, possible sources are public libraries, land-grant university or other large research libraries within a state. Individuals in other countries should submit requests through major university, national, or provincial institutions.

If the needed publications are not available from these sources, the requests may be submitted to NAL with a statement indicating their non-availability. Submit one request per page following the instructions for libraries below.

NAL's DOCUMENT DELIVERY SERVICE INFORMATION FOR THE LIBRARY

The following information is provided to assist your librarian in obtaining the required materials.

LOAN SERVICE – Materials in NAL's collection are loaned only to other U.S. libraries. Requests for loans should be made through local public, academic, or special libraries.

The following materials are not available for loan: serials (except USDA serials); rare, reference, and reserve books; microforms; and proceedings of conferences or symposia. Photocopy or microform of non-circulating publications may be purchased as described below.

DOCUMENT DELIVERY SERVICE – Photocopies of articles are available for a fee. Requests must be made through local public, academic, or special libraries. The library should submit a separate interlibrary loan form for each article or item requested. If the citation is from an NAL database (CAIN/AGRICOLA, *Bibliography of Agriculture,* or the NAL Catalog) and the call number is given, that call number should be listed in the proper block on the request form. Willingness to pay charges must be indicated on the form. Compliance with copyright law or a statement that the article is for "research purposes only" must be included on the interlibrary loan form. Requests cannot be processed without these statements.

Charges:

- Photocopy, hard copy of microfilm and microfiche – $5.00 for the first 10 pages or fraction copied from a single article or publication. $3.00 for each additional 10 pages or fraction.
- Duplication of NAL-owned microfilm – $10.00 per reel.
- Duplication of NAL-owned microfiche – $ 5.00 for the first fiche and $ .50 for each additional fiche per title.

Billing – Charges include postage and handling, and are subject to change. Invoices are issued quarterly by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Requesters are encouraged to establish deposit accounts with NTIS. *DO NOT SEND PREPAYMENT.*

Send Requests to:

More recently, there has been greater use of the introduced bluestems (Bothriochloa sp), particularly in Oklahoma and West Texas. The shift to Old World bluestems is the result of increased seed supply, the relative ease of establishment, and the high forage and beef production potential of these

species. The abundant seed supply is, in part, a reflection of equipment recently developed to harvest and process chaffy grass seed.

Soybean Glycine max (L.) Merr. seeds are prone to imbibitional injury, which may culminate in significant economic losses. This study was designed to investigate the regulation of soybean seed imbibition by the seed coat. The intact seed coat delayed water uptake in the embryonic axis, cotyledons, and whole seed during the first 8 h soaking. The seed coat also assisted in tangential as well as radial displacement of water to the embryo. Scanning electron micrographs revealed a seed coat-derived radicle pocket surrounding the radicle tip as well as hourglass cells in the seed coat, which decreased in size away from the hilum. The function of the radicle pocket and hour glass cells of the seed coat may be associated with water storage surrounding the embryonic axis. This is substantiated by the large water-holding capacity of the seed coat compared to its fresh weight. Isolated seed coats absorbed 3.8 times their fresh weight in water. These studies ascribe a significant role to the seed coat in regulating embryo moisture uptake. Initially, the seed coat retards water uptake and/or governs the direction of water penetration to the embryo and eventually serves as a reservoir of water for the hydrating axis.
